## Key Risks

**Liquidity Risk:** Exists when a particular financial instrument is difficult to purchase or sell. If the relevant market is illiquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous or reasonable price, or at all.

**Limited Diversification Risk:** The Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's Net Asset Value and may make the Fund more volatile than more diversified funds.

**Risk of Investing in Smaller Companies:** The securities of smaller companies may be more volatile and less liquid than the securities of large companies. Smaller companies, when compared with larger companies, may have a shorter history of operations, fewer financial resources, less competitive strength, may have a less diversified product line, may be more susceptible to market pressure and may have a smaller market for their securities. This is a further risk factor of a Hydrogen ETF.

For more information on risks, please see the "Risk Factors" section of the relevant Fund's prospectus, available on [www.vaneck.com](http://www.vaneck.com).
